

What is Respira?

Respira is the air purifier that unifies nature and advanced smart technology to improve the health of your home.

How Does it Work?

Respira pulls air through the top of the system, where a pre-filter removes dust and large particulate matter. The air then passes through the biologically active root zone of the Respira garden. Beneficial organisms within the root zone destroy airborne toxins and chemicals that we would otherwise be breathing. Naturally purified air is then released through the front of the unit.

Benefits

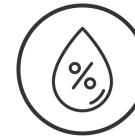

Naturally Purified Air
Respira improves the air quality in your home through the natural and organic process of biofiltration.

Reduce Stress
Plants promote mindfulness while also having a calming and rejuvenating effect on the mind.

Connect With Nature
Biologically, we as humans are driven to connect with nature. Respira is a simple and beautiful way of connecting with the natural world.

Increase Humidity
Reduce dry air and increase comfort by providing additional humidity to your space.

Improve Sleep
The air quality in your bedroom impacts the quality of your sleep. Respira maintains optimal air quality, so you can sleep easy.
